RE: Hydro-Guard® Product Line Simplification

To Whom It May Concern;

Mueller Co. has simplified its Hydro-Guard automatic flushing product line. While this simplification is primarily focused on standardizing the available options and consolidating the number of models offered. Now, dechlorination and sampling is provided as a standard feature on all models with the exception to the HG-6/Basic.

By standardizing options, we are now able to provide “smart” part numbering for use during the ordering process. As shown in the example below, the part number includes the style, backflow protection, programming, valve/pipe size, pipe material, bury depth, and enclosure type:

Below are the Hydro-Guard models now offered by Mueller Co. Where possible, we will continue to support and produce legacy part numbers for customers who have discontinued part numbers currently in service.

Warm Climate

- HG-1 (formerly HG-11, HG-1)
- HG-2 Low Profile (no change)
- HG-2 High Profile (formerly HG-5)

Cold Climate

- HG-3 (formerly HG-31 LongNeck)
- HG-4 (formerly HG-4 LongNeck)
- HG-8 (no change)

Temporary

- HG-6 (no change)

To support the sales of Hydro-Guard automatic flushing systems, we will be releasing a new Section 16 of the Mueller Co. Water Distribution Products Catalog and a new full line brochure. These resources and many more will be available very soon for your use at www.muellercompany.com/hydro-guard. The website Hydro-Guard.com will no longer be available.

In addition, the company has revised the logo and extended the brand to include all products and services used by utilities to flush and monitor water distribution networks. This includes devices and systems provided by Mueller Co. that measure important water quality parameters such as chlorine residuals, pressure, temperature, pH, and more.

Your Mueller sales representative is available to answer any questions or concerns you may have. Thank you.

Sincerely,

Harold Mosley
Product Manager
